

Secure Offices LiFi

LiFi at the service of cybersecurity

An ultra-secure wireless connectivity to guarantee the confidentiality of your sensitive data.

SECURITY

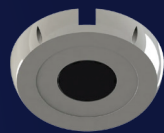

CONNECTION
QUALITY

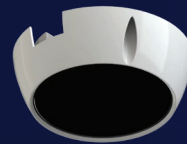

MOBILITY

Oledcomm's LiFiMAX products for Secure Offices

ACCESS POINT

Allows access to the network, contains the intelligence of the LiFi system, including the LiFiMAXController®.

PHOTONIC ANTENNA

A transmitter and signal repeater that allows optimal coverage of the space.

INTEGRATED RECEIVERS

Tablet shells/casings with integrated LiFi for your iOS and Android tablets.

LiFi RECEIVER

To connect computers, tablets and smartphones in plug and play.

LiFiMAXController®

An additional security layer that allows you to remotely manage all access points on your network, configure authentication and monitor logs.

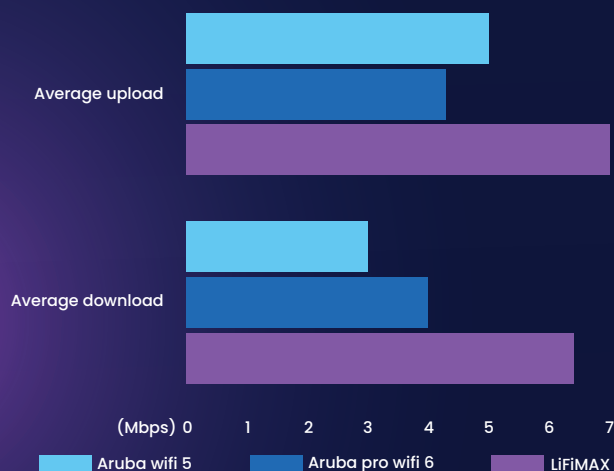

OLED COMM'S ACHIEVEMENTS

Ultra-secure connectivity

Rather than using radio waves, LiFi uses the light spectrum to transmit and receive data. Light has a significant advantage: it doesn't pass through walls. The use of light to exchange data allows to physically secure connectivity within a defined area. LiFi is therefore, by nature unhackable, undetectable and non-interferable thus offering the absolute security of your connectivity.

In order to provide additional security, Oledcomm has developed the LiFiMAXController®, a software program integrated to the access point allowing the complete management and configuration of your network infrastructure.

Better connectivity

- Our solutions offer improved stability and reduced latency
- The absence of radio interference avoids network saturation
- Bandwidth is shared more equitably, thanks to Oledcomm's patented technology

Our cyber security offer

- Preliminary study of the secured areas to be equipped
- Supply of LiFi equipment
- Installation and setup
- Integration with your IT and Cyber infrastructure
- User training
- Preventive maintenance of equipment
- Technical hotline
